Tell me about YourSelf

"Good [morning/afternoon], and thank you for the opportunity. My name is **Routh Kiran Babu** from Odisha, and I have a strong background in software testing with expertise in both manual and automation testing.

I completed my B.Tech in Electronics and Communication Engineering from Centurion University of Technology and Management then I completed my Software Development Engineering in Test(SDET) from masai school Where I started my journey in software testing by mastering manual testing concepts, including writing test cases, executing test scenarios, and performing functional, regression, and exploratory testing. As I progressed, I transitioned into automation testing and gained hands-on experience with Selenium with Java, Cypress, and Appium for web and mobile automation.

I have worked on real-time projects, including automation of login, add-to-cart, and search functionalities using Cypress with Mocha framework, where I implemented assertions, screenshots, and video recording of test executions. Additionally, I have experience with Postman and Rest Assured for API testing, ensuring seamless backend communication.

I have worked on a project related to manual and automation testing using tools like cypress, selenium and appium. One of my key project involved automating end-to-end testing for an e-commerce website, Where I tested functionalities like login, add to cart, and checkout, ensuring smooth user experience.

Apart from automation, I am proficient in Java, JavaScript, and Python, which helps me in designing robust test scripts and frameworks. I also have experience working with GitHub for version control and CI/CD pipelines for test integration.

Currently, I am learning Appium for mobile automation testing to expand my skill set. My goal as an SDET is to build scalable, efficient, and maintainable test automation solutions that improve software quality and speed up the testing process.

I am excited about this opportunity and eager to contribute my skills to your team. Looking forward to discussing how my experience aligns with your requirements."

What did you do for years of gap?

During the past five years, I focused on both gaining industry experience and furthering my education. Initially, I did an internship at Dassault Systems, where I learned about the CAN protocol and Body Control Module, working as an architect. I also had the opportunity to work with Gram Tarang. Unfortunately, due to the COVID-19 pandemic, I lost my job, which led me to shift my focus toward higher studies.

I decided to prepare for the GATE exam with the goal of pursuing an M.Tech. Although my first attempt didn't go as planned, I remained committed, sought guidance from GATE Academy, and studied diligently using their materials for two years. My hard work resulted in

securing an All India Rank of 24,973 out of 63,092 candidates.

After that, I explored job opportunities and realized my passion for the tech industry. This led me to join Masai School, where I began my journey in software development and testing. Here, I've gained hands-on experience in programming languages like Java, Python, and JavaScript, along with automation tools like Selenium, Cypress, and Appium, which have prepared me well for this role.

What are your strengths and weaknesses?

One of my key strengths is my problem-solving ability. I enjoy analyzing complex issues, breaking them down into manageable parts, and finding effective solutions. This skill has been especially useful in automation testing with tools like Cypress and Selenium, where identifying root causes of failures is critical. Additionally, my attention to detail ensures that I catch even minor bugs that could affect the user experience.

Another strength is my adaptability. I've successfully learned multiple programming languages like Java, Python, and JavaScript, along with tools like Postman and Rest Assured, which helps me quickly adjust to new technologies and project requirements.

As for my weakness, I used to struggle with time management when juggling multiple tasks. However, I've been actively working on this by prioritizing my work using productivity techniques like the Eisenhower Matrix and setting clear deadlines. This has helped me manage

my workload more efficiently without compromising quality.

Why should we hire you?

You should hire me because I bring a strong combination of technical skills, practical experience, and a growth mindset that aligns with this role. I have hands-on experience in automation testing using tools like Selenium, Cypress, and Appium, along with a solid foundation in Java, Python, and JavaScript. My recent projects involved end-to-end testing, implementing assertions, handling APIs with Postman, and integrating with GitHub, which shows my ability to work effectively in real-world scenarios.

Additionally, I'm a quick learner, adaptable to new technologies, and committed to continuous improvement. I've also developed strong problem-solving skills through manual and automation testing projects, ensuring software quality and reliability. My passion for software testing, combined with my technical expertise and dedication to delivering high-quality work, makes me a strong fit for this role.

Why do you want to work for our company?

I want to work for your company because of its outstanding reputation for innovation and commitment to quality. I've researched your recent projects and the impact they've made, and I'm genuinely excited about the opportunity to contribute to such meaningful work. Additionally, your focus on continuous learning and professional growth aligns perfectly with my own values.

As someone passionate about software testing and automation, I believe my skills in Java, Python, Selenium, and Cypress can add value to your team while allowing me to grow alongside the company.

Where do you see yourself in five years?

In five years, I see myself as a highly skilled and certified software tester with expertise in both automation and manual testing. I aim to have a deep understanding of tools like Selenium, Cypress, and Appium, along with strong programming skills in Java, Python, and JavaScript. I also envision myself taking on more responsibilities, possibly in a lead or mentoring role, where I can guide new team members, contribute to strategic decision-making, and help improve testing processes. Additionally, I'd like to stay updated with the latest testing trends, expand my knowledge in mobile testing, and play a key role in ensuring the quality and reliability of the products I work on

Why are you leaving your current job?

I'm looking for new opportunities that will allow me to grow both professionally and technically. While I've gained valuable experience in my current role, I feel ready to take on new challenges where I can expand my skills, especially in automation testing with tools like Selenium, Cypress, and Appium. I'm particularly excited about this position because it aligns with my career goals in software testing, offering opportunities to work on diverse projects and contribute to a dynamic team.

What are your salary expectations?

Thank you for asking. Based on my skills in software testing, automation tools like Cypress and Selenium, as well as my programming knowledge in Java, Python, and JavaScript, I believe a fair range would be [insert your expected salary range], depending on the overall compensation package, benefits, and growth opportunities within the company. However, I'm flexible and open to discussing this further to find a number that works for both of us.

Can you describe a challenge you faced and how you handled it?

During my recent Cypress automation project, I faced a challenge while testing the 'Add to Cart' functionality. The issue was that the test cases were intermittently failing, even though the feature worked fine manually. This inconsistency made it difficult to pinpoint the root cause.

To tackle this, I first analyzed the failure patterns and realized the issue was related to dynamic content loading. The DOM elements were not fully loaded before the test interacted with them. I addressed this by implementing explicit waits to ensure elements were visible and interactable before performing actions. Additionally, I optimized the test scripts using Cypress commands like should('be.visible') and wait() where necessary to handle asynchronous behavior more effectively.

After making these changes, the tests ran smoothly without intermittent failures. This experience taught me the importance of handling dynamic web elements efficiently in automation testing and reinforced my debugging and problem-solving skills.

Do you prefer working independently or in a team?

I am comfortable working both independently and in a team, depending on the project's requirements. When working independently, I am self-motivated, organized, and able to manage my time effectively to meet deadlines. On the other hand, I also enjoy collaborating in a team environment, where I can exchange ideas, learn from others, and contribute to a shared goal. For example, in my recent Cypress automation testing project, I handled certain tasks independently, like writing test scripts and managing GitHub documentation. However, I also collaborated closely with my team to review code, discuss testing strategies, and resolve issues efficiently. This balance helped us achieve high-quality results.

Do you have any questions for us?

- 1. "Can you tell me more about the types of applications or systems the QA team currently focuses on testing?"
- 2. "How does the team manage automation versus manual testing? Is there a preferred balance?"
- 3. "What are the biggest challenges your QA team has faced recently, and how did they overcome them?"

For General Company Insight:

- 1. "How do you measure success for someone in this role?"
- 2. "What does the onboarding process look like for new team members?"
- 3. "Can you describe the team culture and how different departments collaborate?"

To Show Interest in Growth:

- 1. "Are there opportunities for professional development, such as workshops or certifications?"
- 2. "How do you support continuous learning and growth within the team?"

To Stand Out:

- 1. "What's something exciting the team is currently working on that wasn't mentioned in the job description?"
- 2. "What qualities do you think make someone truly successful in this position?"
